

Landscaping and Parking Requirements: Comprehensive Zones

This handout outlines the landscaping and parking requirements for single detached, duplex, and townhouse homes located in comprehensive residential zones (Takhini North, Ingram, and Whistle Bend), not including multiple housing.

Landscaping:

Walkway: All homes are required to install a walkway that connects the house to the sidewalk or street. Suitable materials include concrete, paver stones/bricks, or wood.

Ground Cover: Landscaping of the front yard must include a suitable ground cover such as grass, bark-mulch, flower beds, or washed gravel. A weed barrier fabric should be used where grass is not installed. The ground cover must include an organic component (e.g. it cannot be exclusively washed gravel).

Number of Plantings: At least one tree, or three shrubs, must be planted in the front yard. Corner lots must also plant one tree or three shrubs in the exterior side yard.

Size of plantings: The minimum size of deciduous trees is 60 mm caliper (2 ½ inches in width), and coniferous trees is 1.75 m in height measured from ground level. The minimum size of shrubs is #2 pot size (2 gallon) or 1.0 m in height, balled-and-burlapped, measured from ground level.

Timeline: All landscaping must be installed within two years of issuance of occupancy approval.

Landscaping Security: A landscaping security of \$1,000 per lot is collected at time of development permit approval to ensure completion of the required landscaping. Upon installation of the landscaping, the security may be returned to the current property owner. Please visit www.whitehorse.ca/deposits to request an inspection during the growing season (June 1 – September 30).

Boulevard Maintenance: All property owners are required to maintain landscaping in City boulevard areas (this means the grass and trees located between the front lot line and the street). Specifically, grass must be cut to ensure the height does not exceed 10 cm. Trees, plants, shrubs, and turf must be kept free of disease and weeds.

Parking:

Driveway: A hard-surfaced driveway is required. Hard-surfacing means the provision of a durable, dust-free surface constructed of concrete, asphalt or similar material. Gravel driveways are not permitted.

Driveway Width: The maximum width of a driveway providing access from a road is:

- 6.0 m where the lot width is less than 12.0 m
- 50% of the lot width where the lot width is between 12.0 m and 20.0 m
- 10.0 m where the lot width is greater than 20.0 m

Lane Access: Where a lot abuts a lane, vehicle access/driveways are not permitted from road. Only the lane may be used to access the driveway and parking areas. The maximum driveway width does not apply when access is from a lane.

Timeline: A hard-surfaced driveway must be installed within one year after issuance of occupancy approval.

Hard-Surfacing Security: A hard-surfacing security of \$1,000 per unit is collected at time of development permit approval to ensure completion of the required hard-surfacing. Upon installation of the driveway, the security may be returned to the current property owner. Please visit www.whitehorse.ca/deposits to request an inspection.
